The First Choice in Luminescent Paints

Modern Masters uses proprietary, ultra-violet technologies to create Wildfire Luminescent Paints. These paints are water base, easy to apply, color balanced and specifically formulated under UV blacklight for maximum brightness. Since 1989, industry professionals have relied on Wildfire products to create dramatic blacklight visual effects for film, television, theme parks, night clubs and entertainment venues. When quality is a necessary ingredient in your project, you can count on Modern Masters' Wildfire paints to deliver. To find a dealer near you and to obtain product information and specifications, go to: modernmasters.com

Visible Fluorescent Paint

Under visible light each color is distinct and bright, and while under UV blacklight the colors glow

brilliantly, without changing color. This palette includes Wildfire's Optical White, the industries only true "white" under both visible light and UV blacklight. Wildfire paints are water base and made with 100% acrylic binders. They are inter-mixable for a wide variety of fluorescent colors including earth tones and skin tones. Wildfire paints are easily mixed with non-fluorescent paints such as JWR Artist's Acrylics or Theme Paint for creating custom colors and shades. Available in 6 ounce, pint, quart and gallon container sizes.

Phosphorescent Paint

This water base, glow-in-the-dark paint is only available in an eerie Glow Green color. Available in 6 ounce, pint, quart and gallon container sizes.

Invisible Fluorescent Paint

These paints only show their color under UV blacklight. Under visible light these paints appear white, then when UV blacklight is applied they change to a brilliant

color. Blue, Red, Orange, Yellow and Green are available. These paints cannot be mixed effectively to create custom colors, but subtle shade differences can be achieved. Available in 6 ounce, pint, quart and gallon container sizes.

Wildfire Protective Matte Sealer (998)

This water base protective sealer is "dead flat" and totally invisible when applied over Wildfire fluorescent and phosphorescent paints. It contains a unique UV inhibitor that protects the paint while still allowing it to reach its full fluorescent potential under UV blacklight. Available in 6 ounce, pint, quart and gallon container sizes.

Invisible Clear Color

Modern Masters' latest breakthrough in fluorescent coatings technology is Invisible Clear Color, a unique addition to the Wildfire family of brilliant, color balanced, UV activated paints. Invisible Clear Color, when applied under normal lighting conditions, over

any previously painted surface, appears to be a typical, low sheen, protective clear top coat. But, when UV blacklight is applied Wildfire Invisible Clear Color comes to life with the maximum color brilliance you've come to expect from Wildfire! Red, White, Blue, Yellow, Green and Black are available as well as the Invisible Clear Color "Sheen Leveler". These paints cannot be mixed effectively to create custom colors, but subtle shade differences can be achieved. Available in 4 ounce, quart and gallon container sizes.

Invisible Clear Color Sheen Leveler (307)

For use over invisible clear colors only. Images created with Invisible Clear Colors may still be detected in visible light due to variations in the sheen. For example, a stenciled image over a dead flat surface. To eliminate the visible variation in sheen apply 1 or 2 coats of "Sheen Leveler" over the painted image and the surrounding area. Available in 4 ounce, quart and gallon container sizes.

Wildfire Color Card

It is impossible to replicate the vivid fluorescent effects of Wildfire paints in print. To fully appreciate the full range of colors in visible and invisible paint or invisible clear colors, you need to view the actual product under a blacklight. It's easy to order a Wildfire Color Card, just call 1-800-942-3166 and we'll send you one.

Available from Wildfire Lighting and Visual Effects

Spectacular UV lighting effects that "reach out and grab you" are the hallmark of the Wildfire brand of products. With the industries largest selection of high-quality blacklights, you are assured to find the right fixtures and accessories for your project.
